# SMART SECURITY

PREMIUM

**ESET SMART SECURITY PREMIUM IS ALL-IN-ONE INTERNET SECURITY SOFTWARE. IT KEEPS YOU SAFE ONLINE AND OFFLINE - AND INCLUDES ANTI-THEFT TO TRACK, FIND AND HELP RETRIEVE YOUR MISSING LAPTOP, PLUS BOTNET PROTECTION TO DETECT AND PREVENT ATTEMPTS TO INFILTRATE YOUR SYSTEM.**

Integrated antivirus, antispymware, firewall, anti-theft and antispam modules, along with parental control, Password Manager and Secure Data make ESET Smart Security Premium a complete security solution. This manual will guide you step-by-step through a typical installation and the basic configuration of the product.

# SMART SECURITY

PREMIUM

Connected Home Monitor	Script-Based Attack Protection	Anti- Ransomware protection	JAWS	Password Manager	Secure Data
This feature provides you with an easy-to-access list of connected devices, categorized by device type (e.g. printer, router, mobile device, etc.) to show you what is connected to your home network.	Proactively protects you from dynamic script-based attacks and non-traditional attack vectors.	Monitors the behavior of applications and processes that try to modify your personal data.	ESET Smart Security Premium supports the most popular screen reader JAWS.	Employs AES-256 encryption to store and pre-fill all your passwords.	Lets you encrypt files and removable media for ultra-secure safeguarding of your data.

## Installation

ESET Smart Security Premium contains components that may conflict with other antivirus products or security software installed on your computer. ESET strongly recommends that you remove any such programs to prevent potential problems. You do not need to disable or remove the Windows firewall in Microsoft Windows Vista or later, as this is automatically handled by the ESET Smart Security Premium installer.

You can install ESET Smart Security Premium from an installation CD/DVD or by downloading the installer from [www.eset.com](http://www.eset.com).

### Launching the installation

To launch the installer wizard, do one of the following:

1. If you are installing from a CD/DVD, insert the CD/DVD into the CD/DVD-ROM drive. If the autorun menu does not appear automatically, double-click your CD/DVD drive to open it manually.

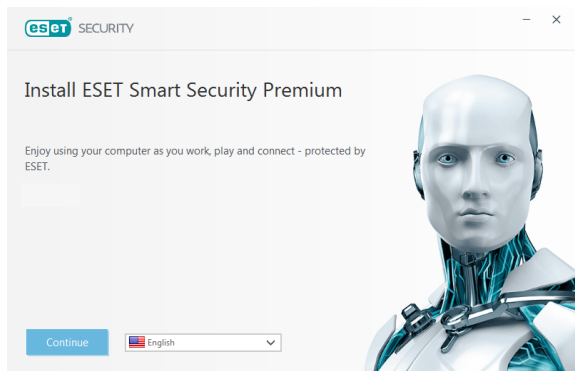

click **I Accept** to acknowledge your acceptance of the End-User License Agreement. After you accept, installation will continue.

2. If you are installing from a downloaded file, double-click the file to launch Live installer. Live installer itself is a small file; additional files required to install ESET Smart Security Premium will be downloaded automatically.

The installer will automatically check online for the latest product version. If a newer version is available, you will be prompted to download it before beginning the installation process.

Next, the End-User License Agreement will be displayed. Please read the agreement and

## Product activation

The **Product Activation** window appears.

- If you purchased a retail boxed version of ESET Smart Security Premium, activate your product using a **License Key**. You can find the License Key on the license card or you have received it via email if you purchased

your license online. For a successful activation, the License Key must be entered as supplied. To renew your existing license, enter your renewal activation key.

- If you would like to evaluate ESET Smart Security Premium before activating, select **Free trial**. Specify an email address. Your test license will be sent to this address and ESET Smart Security Premium will be activated for a limited period of time. Alternatively, you can select **Skip** activation to continue installation without activation. You will be prompted for a License Key later.
- After selecting Use License Manager you will be asked for your my.eset.com credentials in a new window.

- If you do not have a license and would like to buy one, click **Purchase License**. This will redirect you to the website of your local ESET distributor.

#### **Join ESET LiveGrid®**

Help us capture malware by joining our collaboration network. Your participation allows us to gather more sample threats, which helps us to offer increasingly stronger and more efficient proactive protection to all ESET users. We recommend that you enable this feature, and we thank you for your support.

#### **Detection of potentially unwanted applications**

Since some potentially unwanted applications are used legitimately and might not necessarily pose a security risk, the user's consent is required to enable detection.

#### **Completing the installation**

Start the final installation by clicking **Install**. Installation progress will be indicated by a progress bar. After installation is complete, ESET Smart Security Premium will start automatically. A computer restart is not normally required, ESET Smart Security Premium will begin protecting your computer from malware threats immediately.

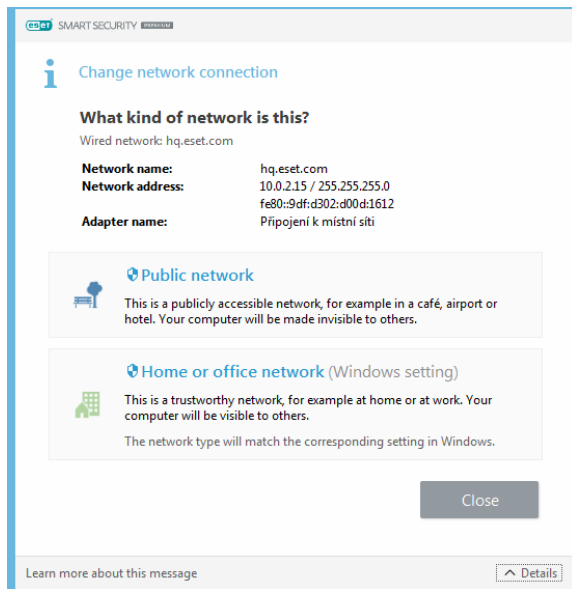

### Trusted zone setup

If a network connection is detected once installation is complete, a notification will appear allowing you to configure a trusted zone. The New network connection detected notification displays the local subnet defined in your computer's system setup. These options only affect the visibility of your computer in the local network, not the internet. There are two access modes available:

- **Public network** – select this option if you do not want to share your folders or printers and want your computer to be invisible to other users on the same network. This setting is recommended for users with a wireless connection.

- **Home or office network** – select this option if you want to share files and folders on your computer and want your computer to be visible to other users in the same network. This setting is recommended for trusted local home or office networks.

## Anti-Theft

To protect your computer in case of a loss or theft click **Enable Anti-Theft** to activate ESET Anti-Theft features for the computer you just registered.

For more instructions about ESET Anti-Theft computer association and to learn how it works see [How to add a new device](#).

## Starting ESET Smart Security Premium

ESET Smart Security Premium starts protecting your computer immediately after installation. You do not have to open the program to start it. You can open ESET Smart Security Premium at any time to check your protection status or to perform various scanning and maintenance tasks.

To open ESET Smart Security Premium, double-click the ESET Smart Security Premium icon  located in your Windows notification area (system tray).

## User interface

The **Home** section informs you about the current protection level of your computer.

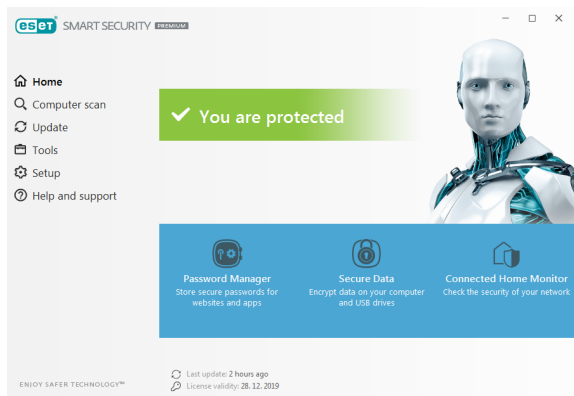

A **Computer scan** is an important part of each antivirus solution. It is used to perform a scan of the files and folders on your computer's disk(s).

The **Update** section contains important information about program updates. It is crucial that the program be updated regularly to provide the maximum level of protection against the latest threats.

The **Tools** section allows you to access advanced features such as **Password Manager**, **Secure Data**, **Connected Home Monitor**, **Banking & Payment protection**, **Anti-Theft** and **More tools** including features such as log files, quarantine, scheduler etc.

The **Setup** options allow you to adjust the protection levels of your computer.

The **Help and support** section provides comprehensive help and support for ESET Smart Security Premium. You can also contact ESET technical support directly from here.

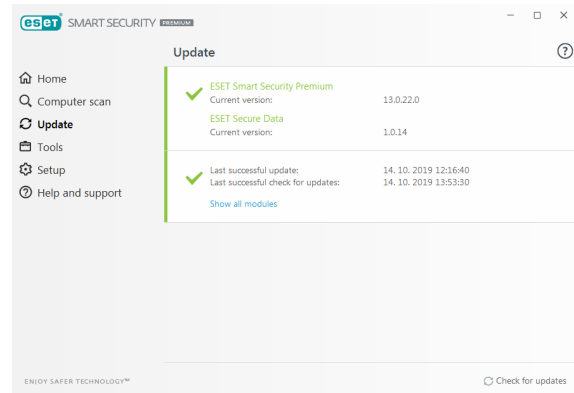

## Update

ESET Smart Security Premium comes with a predefined task to ensure regular updates (see the **Scheduler** section in the product manual). If once installation is completed you have not yet performed an update, we

recommend starting the update manually as follows:

From the ESET Smart Security Premium main program window, click **Update** from the main menu on the left and then click **Update now**.

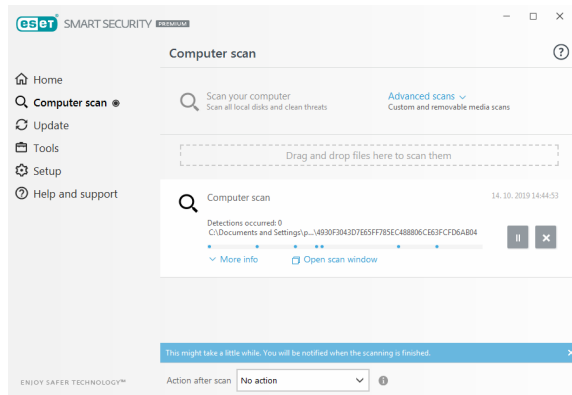

The update module will connect to the Internet, contact an available ESET update

server and download digitally signed update files. These updates contain the most recent malware signatures and new definitions for advanced heuristics as well as other program modules. As soon as a newer update has been installed, ESET Smart Security Premium displays a notification in the system tray area and in the main program window.

## Computer scan

After a successful installation and update, we recommend that you perform a complete computer scan for threats. To do this, click **Computer scan** from the main menu on the left and then select **Scan your computer** from the ESET Smart Security Premium primary window.

**NOTE:** After installing ESET Smart Security Premium, a computer scan will start automatically after first successful update in order to check for malicious code.

Scanning of all local hard drives will start. The status window will display scan progress as well as the current statistics about scanned and infected files found. If a threat is

detected, ESET Smart Security Premium quarantines the file and displays an alert in the system tray area. You should be able to continue working as normal while the scan takes place.

## Protection status

ESET Smart Security Premium's current protection status is indicated in the following ways:

### The system tray icon

The **Home** section displays a detailed report of your protection status. In the event that any protection module is disabled, the **Home** window will show the name of the disabled module, along with a link allowing you to re-enable it.

The individual protection statuses are indicated by the following icons:

#### Green

Antivirus protection is working properly and your computer is protected against malicious software as well as network attacks. This status indicates that all protection modules are enabled and the detection engine is up-to-date.

#### Orange

This icon is displayed if your operating system does not have all necessary operating system updates installed.

The orange icon is displayed if

- Real-time file system protection is enabled,

but the maximum level of protection is not ensured.

- Email client protection or Web access protection is disabled or malfunctioning.

### **Red**

- Real-time file system protection is disabled or malfunctioning. Since the proper function of this module is vital to your system's security, we recommend re-enabling the inactive module immediately.

- The detection engine is out of date. If the detection engine is not updated automatically, try to update it manually, or check to see if the computer is connected to Internet.

## **Resolving issues**

ESET technical support specialists are ready to assist you in resolving any issues you may have. Before contacting technical support, we strongly recommend that you read the related topic in the product documentation (<https://help.eset.com>) or search for a solution on the ESET website. For solutions to specific issues or questions about features and products, visit our Knowledgebase at: <https://support.eset.com>

To contact ESET technical support, use the web form available at:  
[www.eset.com/support/contact](http://www.eset.com/support/contact)

### **Submitting a technical support query**

In the event of a problem, contact ESET Customer Care using the query submission form integrated into ESET Smart Security Premium. Click **Submit support request** in the **Help and support** section.
